(a)

D:
$$EE$$

$$= \frac{1}{4\pi} \int \frac{Px \, dx \cos \theta}{R^2}$$

$$= \frac{2\pi \, dx \, dx}{4\pi \, R^3} \int dq$$

$$= \frac{2\pi \, dx \, dx}{4\pi \, R^3} \hat{x}$$

$$= \frac{2\pi \, dx \, dx}{4\pi \, R^3} \hat{x}$$

$$= \frac{2\pi \, dx \, dx}{4\pi \, R^3} \hat{x}$$

$$= \frac{2\pi \, dx \, dx}{4\pi \, R^3} \hat{x}$$

$$= \frac{2\pi \, dx \, dx}{4\pi \, R^3} \hat{x}$$

$$= \frac{2\pi \, dx \, dx}{4\pi \, R^3} \hat{x}$$

$$= \frac{2\pi \, dx \, dx}{4\pi \, R^3} \hat{x}$$

$$= \frac{2\pi \, dx \, dx}{4\pi \, R^3} \hat{x}$$

$$= \frac{2\pi \, dx \, dx}{4\pi \, R^3} \hat{x}$$

$$= \frac{2\pi \, dx \, dx}{4\pi \, R^3} \hat{x}$$

$$= \frac{2\pi \, dx \, dx}{4\pi \, R^3} \hat{x}$$

$$= \frac{2\pi \, dx \, dx}{4\pi \, R^3} \hat{x}$$

$$= \frac{2\pi \, dx \, dx}{4\pi \, R^3} \hat{x}$$

$$= \frac{2\pi \, dx \, dx}{4\pi \, R^3} \hat{x}$$

$$= \frac{2\pi \, dx \, dx}{4\pi \, R^3} \hat{x}$$

$$= \frac{2\pi \, dx \, dx}{4\pi \, R^3} \hat{x}$$

$$= \frac{2\pi \, dx \, dx}{4\pi \, R^3} \hat{x}$$

$$D_{Q} = \frac{Q}{4\pi R_{Q}^{3}} \hat{Q}$$

$$= \frac{Q}{4\pi R_{Q}^{3}} \cdot 2(3\hat{x})$$

$$R_{Q}^{3} = (3^{2} + 3^{2})^{3/2}$$

$$- 76.4$$

$$D_{Q} = \frac{6Q}{4\pi \cdot 76.4} \hat{x} = 6.25 \times 10^{-3} Q \hat{x}$$

$$D = D + D_{Q} = 0$$

$$6.25 \times 10^{-3} Q \hat{x} = -0.3Q$$

$$Q = -51.2 \mu C$$
